

Press Release

**MAK EXPORT CEREMONY (MEC)
MAK Export Product Dispatch to 5 countries and
EOP (Export Oriented Production) Plant Officiation**

PT Mega Andalan Kalasan (MAK) has been entering the global market since 2005 and up to now exporting to more than 40 countries including European, African, Middle East, ASEAN countries, Japan, Australia, and New Zealand. Among which, the main destination countries are Japan, UAE, France, Myanmar, and Tanzania.

Since 2013 MAK has been working with a Japanese company for OEM projects with total up to 547 container or 49,289 Homecare Bed unit equivalent or about USD 10 million in 5 years. In order to anticipate an increasing demand, MAK builds an export- dedicated facility called Export Oriented Production (EOP) Plant with 10 containers/week or USD 10 million per year capacity, which is expected to be achieved in 2020.

The Minister of Health of the Republic of Indonesia officiated EOP (Export Oriented Production) Plant and the dispatch of MAK Export Products to 5 countries including Japan, Tanzania, Australia, Myanmar, and the Philippines on November 1st, 2018.

PT MAK's achievement in export was acknowledged by the Ministry of Trade of the Republic of Indonesia through Primaniyarta Award in 2016 and 2017 for Pioneer to the New Market category.

The key to success in PT MAK's export market development is continuous improvement in Quality, Cost and Delivery to guarantee customer satisfaction. Quality that meets customer's expectation, competitive price, and prompt delivery are the main features in our industry. To ensure the product quality, PT MAK tests their products in MAK Laboratory,

which has been certified by KAN (National Accreditation Committee), and also maintains GMP

(Good Manufacturing Practice) by applying Management Information System or Industrie 4.0 since 2013.

Quality assurance is performed by implementing CPAKB (Proper Healthcare Equipment Production Method), ISO 9001, ISO 13485, and IEC 60601-2-52 as well as International Standard such as CE and FDA.

This event was being held at Mega Andalan Teknopark (MAT), an industrial ecosystem area built by PT MAK with the intention of promoting industry as one of the source of economic growth in Sleman (where MAT is located), and ultimately in Yogyakarta.

MAT is expected to be the role model for economic development in other areas across Indonesia so that one day there will be massive economic development with industrial basis as what has been happening in China in the past three decades.

Yogyakarta, November 1st, 2018
